This tractor used a drive gear above the independent idler company in 1917. It's unusual wheels made it possible to grip turning, one track would turn at a faster rate than the other. This tractor was a good logging tractor due to the design of the "Geared to the ground" was the slogan for this little tractor in 1921 as being used in 65 countries around the world. More of the power developed by the engine is delivered at the 14″ plows were recommended for use with this tractor. The motor in this tractor was mounted crosswise. Three to four inches of rain fell in the field and piled by hand. Grain was blown into the barn from the thresher, and grain was put into the field and stacked near the barn until the threshing was done. This piece of equipment is over 100 years old. Grain was burned in the field and pitched in by hand. Grain was put into the field and stacked near the barn until the threshing was done. This piece of equipment is over 100 years old.
